I am looking for someone who can Read and Write.

I am just looking for someone who can read and write.

Some people think I am joking. They actually believe that they can read and write.

If that is true, than the person I am looking for can read and write in the four grammar systems we are factually given.

Common Grammar, Arithmetic, Algebra and Geometry.

I am looking for someone who can see the similar idea in these many examples. Each of them presents a distinct method of using binary recursion. Dialectic, as Plato called it, if he found someone who could do that, he would walk in their footsteps as if they were a God.

Such a person can grasp with their mind that all information processing is binary, relatives and correlatives, nouns and verbs.

The easiest way to test a mind is, can they read and write. I have created a library of Geometry, the likes of which has never existed before, a perfect binary Grammar. I take one from showing the foundation of mathematics all the way up to showing how to draw interactive computers. Geometry can, as Plato noted, be paired to all four members of our Grammar Matrix, Common Grammar, Arithmetic, Algebra and even Geometry itself. You can draw a figure, and write the equations to that figure, and you can reduce it, geometrically to pure mathematical geometry.

Most people believe that they are literate. If that were true, they could say the same things simultaneously in all four systems of grammar. In other words, repeatability in all four. That is what I do in my work.

So, I have never found anyone, in my whole life, who could.

I am not interested in the few crackpot blowhards that plague this forum. I am just looking for someone who can actually read and write, or can be taught how to.

Simple people look at the geometry, and they say despite all the equations and figures agreeing together, that they do not see anything. I know they don't they cannot read and thus, cannot write.

Our grammar matrix, every member, is binary based. If you do not comprehend it. you cannot read.

I taught myself. I did all the work required in Geometry. Now, how many people can learn to read and write? I do not know.

Every attempt at civilization has required these four systems of grammar. So, if you know the Science of Grammar, you can read and write, or learn to, and know, our job is to build a civilization. If you cannot teach a child how to build a civilized mind, you cannot teach a child how to build and maintain a civilization.
